

Job Title: ML Engineer / Data Scientist

Experience: 1–4 Years

Location: Pune

Employment Type: Full-time

Role Overview

We are looking for a curious and logically driven **ML Engineer cum Data Scientist** to join our team. You are someone who doesn't just "run models" but deeply understands the *why* behind the data. Your primary mission will be to let the data speak, uncovering hidden patterns and building predictive systems that drive real-world impact. You will transition seamlessly between data engineering, exploratory analysis, and model deployment.

Key Responsibilities

- **Data Storytelling:** Analyze large, complex datasets to identify trends and patterns. Translate raw data into clear, insightful narratives for stakeholders.
 - **Model Development:** Design, train, and validate Machine Learning models (Regression, Classification, Clustering, etc.) to solve specific business problems.
 - **End-to-End Pipeline Management:** Clean, preprocess, and engineer features from diverse data sources, ensuring data integrity throughout the lifecycle.
 - **Algorithmic Logic:** Apply strong logical and mathematical reasoning to optimize model performance and troubleshooting.
 - **Cross-Functional Collaboration:** Work closely with product and engineering teams to integrate ML models into production environments.
-

Required Skills & Qualifications

- **Technical Foundation:** 1–4 years of experience in data-centric roles. Proficiency in **Python** (Pandas, NumPy, Scikit-learn) and **SQL** is a must.
- **ML Knowledge:** Solid understanding of machine learning algorithms and statistical modeling.
- **Problem Solving:** Exceptional logical ability with a "first-principles" approach to problem-solving.
- **Data Visualization:** Experience with tools like Matplotlib, Seaborn, or Tableau/PowerBI to present insights visually.

Preferred "Plus" Factors

- **Certifications:** Completion of recognized Data Science or Machine Learning professional courses (e.g., Coursera, Udacity, or specialized bootcamps).
- **Spatial Intelligence:** Prior exposure to **location/geospatial data** (using GeoPandas, Shapely, or H3/S2 libraries) is a significant advantage.
- **Engineering Mindset:** Experience with MLOps tools or deploying models via APIs (Flask/FastAPI).

Education

- B.Tech/B.E. in Computer Science, Statistics, Mathematics, or a related quantitative field.
